Abstract (en)

[origin: EP0028741A2] The vacuum cleaner has a dust bag space (2) and a fan motor (5) disposed axially at the rear thereof. A filter (11) is arranged downstream of the fan motor (5) and the discharge air flows through a hollow space (7) provided between the dust bag space (2) and the bottom (10) of the vacuum cleaner housing (1). In order to achieve an effective noise insulation, downwardly directed discharge openings are provided in the bottom (10) of the vacuum cleaner housing (1). <IMAGE>
