Abstract (en)
[origin: EP0028850A1] Aqueous, built liquid detergent compositions on the basis of a nonionic detergent, a builder salt, and a mono alkyl- or alkenyl C7-C12 succinate (as hydrotrope) suffer from unsatisfactory storage stability at lower temperatures or under changing temperature conditions. By inclusion of a small amount of a C10-C15 alkylbenzene sulphonate, the storage stability under these conditions is significantly improved. These compositions are particularly suitable for industrial laundering purposes.
