Abstract (en)

[origin: EP0028947A1] Electrical connector insert for removably receiving elongated electrical contacts which is adapted to secure a plurality of contact resilient retention clips (29). This insert (10), which is an integral body molded of a dielectric material, includes passages (15) having respectively therein retention shoulder housings (17) and an abutment (21) which define a cavity within which an individual retention clip (29) can be removably mounted. A means for molding the insert (10) includes a core pin and a cooperating bushing.
