Abstract (en)  
[origin: WO8002544A1] The invention relates to the package industry, more particularly the manufacturing of containers with thin and flexible walls for liquids under pressure. These containers are characterized by at least a bottom having the shape of a bulging dome (1) integral with a cylindrical coaxial flange (8) extending on either side of the dome (1). This flange (8) reinforces the bottom strength while providing a firm securing thereof with the body. These containers allow the conditioning in economic conditions of pressurized liquids such as carbonated beverages.

Abstract (fr)  
L'invention concerne l'industrie des emballages, plus particulièrement la fabrication de recipients a paroi souple et mince pour des liquides sous pression. La particularite de ces recipients est d'avoir au moins un fond en forme de calotte bombée (1) solidaire d'une collerette cylindrique (8) coaxiale s'étendant de part et d'autre de la calotte (1). Cette collerette (8) renforce la resistance du fond tout en assurant sa bonne liaison avec le corps. Ces recipients permettront le conditionnement dans des conditions economiques de liquides sous pression tels que les boissons carbonatees.
