Abstract (en)

[origin: EP0070576A1] 1. Casement bolt for a door, window or the like, having a driving mechanism integral with the leaf comprising a doorknob hole piece (7) allowing the working of at least an operating rod (6) provided with at least a bolting element entering into a keeper solid with the frame ; elastic return means (28) permitting to the operating rod (6) to pass from the unbolted position to the bolted position ; and a locking element (39) allowing the upholding of the operating rod (6) in the unbolted position, said locking element being resiliently returned into the position insuring the upholding of the operating rod (6) in the unbolted position, said locking element being fitted to project on the edge of the leaf and to co-operate with unlocking means (65) integral with the frame, characterized in that the locking element (39) is movable into a groove (55), transversely with respect to the edge of the leaf.
