Abstract (en)
[origin: WO8002649A1] The handle for a ski stick allows a significant reduction of fatigue of the hand, the arm and particularly the hand joint during skiing. This relief is achieved by a horizontal position of the hand with flexion of the joint about an axis parallel to the surface of the hand and perpendicular to the lower arm. The handle of the stick has a symmetric T shape (1). The central portion (2) of the T is shaped so as to correspond to the shape of the palm of the hand, this enlarged portion is connected to the bar of the T and conformed to adapt the thumb. The upper terminal ends of the bar of the T are turned up to maintain the fingers of the folded hand.

Abstract (fr)
La poignee de baton de ski proposee permet de reduire considerablement la fatigue de la main, du bras et notamment de l'articulation de la main lors de la pratique du ski. Ce soulagement est obtenu par une position horizontale de la main avec flexion de l'articulation autour d'un axe parallele a la surface de la main et perpendiculaire au bras inferieur. La poignee de baton presente une forme en T symetrique (1). La partie centrale (2) du Test conformee pour epouser la paume de la main, cette partie elargie est raccordee a la barre du T et conformee pour s'adapter au pouce de la main. Les extremités terminales superieures de la barre du T sont relevees pour retenir les doigts de la main repliee.
