Abstract (en)
[origin: EP0029878A1] 1. Mounting and fixing a tiltable vessel or converted on a substantially horseshoe-shaped carrier ring which is closed or open towards one side and which surrounds the converter casing at a spacing, at three points, by means of releasable support and connecting elements which are arranged at spacings of about 120 degrees, and brackets secured to the periphery of the converter casing, one of said brackets being disposed in the plane of tilting movement of the converted, characterised in that the carrier ring (3, 3a, 3b) has upwardly or downwardly extended box walls (9) in which three carrier axis members (7) arranged, with axes parallel to and at a spacing perpendicularly below or above the brackets (2) which are fixed to the converter casing (1a), and the bearing housings (5) of the pivot bearings (6) associated with the carrier axis members (7) bear against the top or bottom of the brackets (2), and that hinged screws (8) are pivoted to the bearing housings (5) and are passed in slots through the brackets (2).
