Abstract (en)
[origin: EP0030183A1] 1. A heater body for a domestic hot water central heating boiler heated by gas of the forced draught type comprising a longitudinal bundle of tubes having an elongate section in which the water to be re-heated circulates, disposed along the generatrix of a cylinder for forming an internal cylindrical combustion chamber, characterized by the fact that the median longitudinal plane A1 B1 of each of the tubes (10) is inclined at an angle α relative to the radial direction AB of flow of the combustion gas for creating an oblique incidence of this gas on said tubes.
