Abstract (en)
[origin: EP0030398A2] Front-tent construction characterized in that it mainly consists of a first stretching arm (8), one end of which is freely rotatable around a spindle (7); at least two additional stretching arms (12-13) either of them also being freely rotatable around a spindle (14-27-28); in every of the aforesaid two or more additional stretching arms (12-13) an outward pivoting support (19), wherein the hinged joint (18) between this support and the stretched arm referred to lays close to the free end of this stretching arm (12-13) and is connected to the aforesaid stretching arms (8-12-13) and to a fixed part of the construction with which the front-tent roof, i.e. the front-tent roof proper (10), has to co-operate.
