Abstract (en)
The invention relates to a flexible container for transport and storage of bulk material. The container may be equipped with an inner bag of impervious material. The container is emptied by cutting a hole in its bottom (2) or side walls and this part of the container is made of laminated material in order to avoid contamination by fiber particles or other contaminants of the container's content during discharge. The container's bottom (2) is preferable made of plastic fibers or threads laminated sheet plastic.
