Abstract (en)  
[origin: WO8002879A1] Separably laminated composite photographic structure. A light sensitive element (21) is adhered to a transparent barrier foil (23), which in turn is removably adhered to a photographic carrier sheet (25). Adhesive layer (30) is firmly bonded to the outermost surface of element (21). After an image has been developed in element (21), adhesive layer (30) is adhered to a substrate (40). Carrier layer (25) is then stripped away, leaving imaged element (21) bonded to substrate (40) and protectively covered by barrier foil (23).
