Abstract (en)
[origin: US4398747A] This toe-fitting for safety ski binding is of the type intended for operating in conjunction with a boot supporting device and includes a boot supporting plate movable across the ski and adapted, during its movement, to cause through a cam mechanism the translation along the ski axis of a slide controlling the release spring in order to reduce the resistance thereof to the ski boot release movement, the release threshold being thus kept to a substantially constant value notwithstanding the presence of dirt, mud or other unevennesses on the bottom surface of the boot sole.

Abstract (fr)
- Butée avant pour fixation de ski de sécurité associée à un dispositif de support de la chaussure. - La plaque de support 12 est mobile transversalement; son déplacement provoque, par l'intermédiaire d'une came 16, le déplacement longitudinal d'un coulisseau 18, 19, agissant sur le système élastique 22, 24 pour en abaisser la dureté. - Maintien à une valeur sensiblement constante du seuil de déclenchement malgré l'enrassement ou la détérioration de la semelle de chaussure.
