Abstract (en)
[origin: WO8100248A1] The device for winding threads or similar comprises a friction driving shaft (14) and a bobbin holder shaft (11). The bobbin holder shaft (11) is overhung allowing an easy access. To eliminate any deflection of the parallelism of the two shafts (11, 14), that is to say to obtain perfect bobbins (12) a coupling means (20) is coupled to the shaft (11) which slides during the winding causing a forced parallelism of the two shafts (11, 14).

Abstract (fr)
Le dispositif de bobinage pour fils ou analogue comprend un arbre d'entrainement par friction (14) et un arbre porte-bobines (11). L'arbre porte-bobines (11) est en porte-a-faux permettant un acces facile. Pour eviter la moindre deviation du parallelisme des deux arbres (11, 14), c'est-a-dire pour obtenir des bobines impeccables (12) un moyen de couplage (20) est accouple avec l'arbre (11) qui coulisse pendant le bobinage ce qui provoque un parallelisme force des deux arbres (11, 14).
