Abstract (en)
[origin: EP0032114A2] In a hair curler, a hair roller (6), provided with radially projecting spikes (12), can be removed from the heatable curler rod. In order that the heatable surface (3) of the curler rod (2) is as fully effective as possible for heating the hair, the sleeve of the hair roller is perforated in relatively large areas and the hair roller is arrested against radial rotation on the curler rod. This is achieved in that the curler rod (2) has outwardly open longitudinal grooves (4) and the hair roller (6) has inwardly projecting guide webs (8) which fit into the longitudinal grooves. <IMAGE>
