Abstract (en)

[origin: EP0032247A2] The continuous process for the dyeing or printing of textile material made of wool and/or cellulose with fibre-reactive dyes is characterised in that the textile material is briefly contacted in the wet state on one side with a transfer, provided with coloured drawings or a solid shade pattern of fibre-reactive dyes, and on the other side with a heated support, the temperature being chosen in such a way as to avoid boiling of the solvent, i.e. particularly water, which is present on the textile material. Immaculate prints are obtained.
