Abstract (en)
[origin: EP0032280A2] An incinerator (1) for burning garden or domestic refuse comprising a hollow truncated cone (2) of incombustible material and a support frame (3). In order to enable the incinerator to be easily dismantlable, the truncated cone (2) is formed from two trapesium shaped sheets (10) which are bent into the required shape, the resulting truncated cone being disposed, with its narrower aperture (13) lowermost, in the support frame (3) which supports the cone (2) in such a manner that the frame itself is not subjected to direct heating by the flames of burning refuse in the incinerator.
