Abstract (en)  
[origin: EP0032412A2] 1. Process for manufacturing metallurgical coke from a mixture of coal fines of low coking or non-coking quality and coal fines of coking quality, in which the moisture content of the said coal fines of low coking or non-coking quality is reduced to a value of less than 3% and in which a suitable quantity of binder and/or solvent is added to the said dried coal fines of low coking or non-coking quality, characterized by the fact that the aforementioned coal fines of low coking or non-coking quality, having been dried and coated with binder and/or solvent, are mixed with the said coal fines of coking quality, the mixture then being charged in that state into the coking oven.
