Abstract (en)

[origin: EP0032960A1] A porous body (5) is interiorly electroplated by substantially initially filling at least a portion of the void spaces (6) in the body (5) with an electroplating or deposit-releasing bath solution or dispersion (7); subsequently immersing the body (5) in a non-plating or non-depositing electroconductive liquid media (10); and applying a plating current to the body (5) to plate the interior surfaces (6) of the body.
