Abstract (en)

[origin: EP0033179A1] A device for fixing a wall cabinet (29) to a wall, of the type comprising a box (11) designed for fixing to the cabinet (29), and a hook (12) extending from said box (11), said hook (12) being adjustable in position in terms of height and depth along planes perpendicular to each other, wherein the hook (12) comprises a fork (13) connected in a straddling manner to a load-bearing member (10) contained in the box (11), for adjusting the position of the hook (12) in terms of height and depth there being provided respective means accessible from that side of the box (11) opposite the side from which the hook (12) emerges.
