Abstract (en)
[origin: US4454694A] The protective enclosure is of the type composed of several panels of square or rectangular shape removably assembled to one another. Each panel is generally constituted by a sheet-metal plate whose edges are folded so as to form a stiffening frame bordering the inner surface of the panel and defining, on the side of said inner surface, a space adapted to receive a thermally and/or acoustically insulating material. Each said panel is equipped, on at least three of its edges, with means enabling it to form a rigid assembly with adjacent panels, and ensuring, simultaneously their tightening, their alignment and/or their squaring.

Abstract (fr)
Ce capot de protection et/ou d'isolation thermique et/ou phonique composé de panneaux (2) assemblés est caractérisé en ce que chaque panneau (2) comporte, sur ses bords externes et/ou sur ses chants, des moyens d'assemblage (3) capables d'assurer, seuls, le serrage, l'alignement et l'équerrage des panneaux entre eux en l'absence de toute armature ou dispositif intermédiaire et en procurant la rigidité nécessaire au capot monté, tout en permettant le démontage rapide de l'extérieur d'un ou plusieurs de ses panneaux.
