Abstract (en)
[origin: EP0033382A2] 1. A cutter drum for cutting flat wood flakes, having a plurality of peripheral recesses (2) in each of which are arranged a resharpenable cutting member (9), an abutment face (6) determining the position of said cutting member, a cutter bar (5) connected via a form-locking member (4) to a body part (1) of said cutter drum, and a centrifugally actuated wedge-shaped member (10) acting upon said cutter bar (5), characterized in that in each peripheral recess (2) an abutment strip (7) is additionally arranged loosely abutting against said abutment face (6), said cutting member (9) with its rear face being displaceably and fixably held on said abutment strip (7) and loosely abutting with its front face against said cutter bar formed as a cutter clamping bar (5).
