Abstract (en)  
[origin: EP0033440A2] 1. Offset printing press with a damping unit (9) and an inking unit (8) by means of which in each case damping liquid or ink can be fed by means of rollers rolling against one another to the printing plate on a plate cylinder (7), wherein the feed of damping agent can be metered by changing the rotational speed of the damping fountain roller, preferably in dependence on an apparatus measuring the damping agent layer covering on the printing plate, characterised in that, coupled to printing throw off, with damping applicator roller (30) remaining against the plate cylinder (7) in its throw on position, a doctor device (32) arranged on the damping unit (9) or the plate cylinder (7) can be switched in.
