Abstract (en)

Safety fuse-carrier intended to receive a fuse without danger when handling the fuse. The fuse 27 is received in a cradle 30 intended to be inserted into an opening. The cradle comprises a retaining means 35, 36 which prevents it being withdrawn completely from the opening. When it has been withdrawn as far as possible, a shutter 34, which may be part of the cradle, plugs the opening to prevent insertion of a fuse into this opening without this fuse being placed in the cradle. Thus, the user cannot place the fuse in contact with a live part and electrocute himself. Application to fuses incorporated in electrical sockets. <IMAGE>
