Abstract (en)
[origin: WO8100199A1] Application unit to be used for epicutaneous testing to clarify the etiology and diagnosis of allergic contact eczema and for the administration of therapeutically active substances for topical treatment of skin diseases, and comprising a carrier (10) which consists of a number of application devices (11) each one of said devices is supplied with an application surface (13) for one substance (14). The application device is composed of a nonabsorbent material. The said application surface is essentially located at the same level with the carrier's adhesive surface (12) and is surrounded by an annular groove. The application units are covered by a covering layer (17) which is provided with domes (18) located above each application device and encompass the substances hermetically.

Abstract (fr)
Unite d'application utilisee pour effectuer un test epicutane en vue d'eclaircir l'etilogie et le diagnostic d'eczema de contact allergique et pour administrer des substances therapeutiquement actives pour traiter en surface les maladies de la peau, et comprenant un organe porteur (10) qui consiste en plusieurs dispositifs d'application (11) chacun de ces dispositifs recevant une surface d'application (13) pour une substance (14). Le dispositif d'application se compose d'un materiau non-absorbant. Ladite surface d'application est essentiellement situee au meme niveau que la surface adhesive (12) de l'organe porteur et est entouree d'une rainure annulaire. Les unites d'application sont recouvertes d'une couche de couverture (17) qui est pourvue de domes (18) situes au-dessus de chaque dispositif d'application et enferment les substances hermetiquement.
