Abstract (en)
[origin: EP0033790A1] An apparatus for feeding a liquid to an applicator especially a paint applicator (8) is particularly easy to use and to clean. The apparatus includes a vessel (1) and a pressurizing assembly (9) supported on the vessel (1) and including a housing for receiving a capsule of liquefied or pressurized gas and pressure reducing means. Liquid (16) to be applied is expelled from the vessel (1) through a feed conduit (3) to the applicator. In the preferred form of the apparatus, the vessel (1) receives a container (2) in which the liquid to be fed is initially supplied.
