Abstract (en)

A corner joint to form a right angle between a pair of adjacent panels (10, 11) has a base (13) and two depending integral walls (16, 17) lying at right angles to each other the inner sides of which are intended to receive the two panels. The walls have large apertures (18, 19) behind which there are resilient tongues (20, 21) also depending from the base and inclined towards the respective walls (16, 17) to press the panels (10, 11) against the walls. The apertures in the walls permit access to the tongues (20, 21) through the walls (16, 17) to enable the tongues (20, 21) to be pressed away from the walls (16, 17) when assembling the joint at a corner of a box.
