Abstract (en)
[origin: EP0035452A2] 1. A continuous refrigerating or freezing cell for treating products packed in optionally sealed boats (19), comprising a thermally insulated chamber (8) subdivided into at least two parts, and comprising a self-contained refrigerating apparatus (6) of its own, characterized in that the chamber (8) includes support means (3) for said products forming an endless system with a single vertical loop with the position of said support means relative to the top wall of the chamber being adjustable, the chamber further including a thermally insulating sectioning means (5) adapted to be moved away in the zones through which said support means (3) passes and partitioning the interior of the chamber into two vertically superposed parts.
