Abstract (en)

[origin: WO8100830A1] The device is intended to be used for the guiding of endless forms (7-12), for example as roller-forms or pile-forms, in a printer (4) of a data processing unit. The rollers or piles (6) are arranged one under the other and/or side by side. The forms are flat and capable of being drawn side by side upwardly. A guiding device (13) is provided above the rollers or piles. It has slots (14) each of which allowing the passage of a form. At each slot, a holding device (16, 17) prevents the corresponding form from sliding downwardly.
