Abstract (en)
The application provides a load handling vehicle with a chassis (1) and a telescopic load handling member which may be increased or decreased in length as required. The load handling member is movable about both a horizontal axis (x) and a vertical axis (y-y) so that the load handling member may extend either to the front or to the rear of the vehicle. The load handling member comprises a boom (5) of two or more telescopic sections pivotally mounted at one end to the chassis (1) and having a load handling attachment (6) at the other end the load handling attachment (6) being detachable and selected from a fork carriage, a shovel loader bucket and a digger bucket.
