Abstract (en)
[origin: EP0036537A2] 1. Process for dyeing polyester/cellulose fibre mixtures by the exhaustion method in one stage from a single bath, using a dyebath which contains, in addition to a disperse dyestuff, a reactive dyestuff and 0.1-5 g/l of an acid donor which is effective at the dyeing temperature, characterized in that the reactive dyestuff used is a reactive dyestuff with a fluorotriazinyl or fluoropyrimidinyl group and the initial pH value of the dyebath is adjusted by adding disodium hydrogen phosphate or a trisodium phosphate/monosodium dihydrogen phosphate mixture.
