Abstract (en)

[origin: ES8202070A1] The present invention relates to the system of angular connection of the eccentric of each element of a dobbie either with the shaft or with the corresponding arm. This connection is ensured by a double hook borne by the eccentric and mounted to rock so that one or the other of its noses engages in a notch made in the periphery of a driving device fixed to the shaft, or in a notch in a bead of the arm.
