Abstract (en)

[origin: WO8102695A1] Sorting cylinder for different kinds of seeds, having an horizontal calibrating cylinder (11) operated and supported by rolls (22, 23, 24, 25). The calibrating cylinder (11) is enclosed within a fixed housing provided with an inlet (4) for the seeds to be sorted and bypassing means (5, 6, 7) for the sorted fractions and a removable longitudinal lateral wall (41, 42). In order to facilitate storing as well as replacement of cylinder by inexperienced staff, the calibrating cylinder (11) is designed to be freely supported by four rolls (22, 25) and at least one of the four rolls (24, 25) can act as a driving wheel (25) and the cylinder (11) can be freely lifted upwards, or it can be respectively mounted and disassembled through a longitudinal wall (41, 42) of the housing.
