Abstract (en)  
[origin: EP0037061A1] 1. Hanger for a support beam (5) of a suspended ceiling, which beam is provided with a perforated longitudinal web (7) and is T-shaped in cross-section, having a vertical hanger rod (3) which at its lower end is bent to form a hook arm (11) which can be hooked into a hole (10) of the longitudinal web of the support beam, characterized in that the upwardly directed hook arm (11) is adjoined by a rising rod portion (12) which is bent out of the hook plane and which merges into a retaining portion (13) extending over the longitudinal web (7) of the support beam, the distance between the retaining portion (13) and the vertical part of the hanger rod (3) being great enough to enable the support beam (5) to be hooked on in an inclined position of the hanger rod.
