Abstract (en)
[origin: EP0037131A2] 1. A door sealing device having a rail (10) which is open at its bottom side and has a rectangular cross section and a leaf spring (19) which extends in the form of two flat arches and at the lower crowns of the arches of which a bar having a rubber strip is mounted, the perpendicular shifting of the rubber strip being effected by the application of pressure on the leaf spring (19) in the longitudinal direction thereof, characterized in that the leaf spring (19) is fixedly clamped at half the length of the rail to the rail web portion and that each end of the leaf spring (19) is pivoted to a slide (14, 20) guided in the rail (10) in the vicinity of the web portion thereof.
