Abstract (en)
[origin: US4391483A] An improved sealing system for use with cooperating electrical connectors for placing two cables of the type wherein each of the cables has an insulator sheath in contact. A contact is inserted into a lodging in each of the connectors with a resulting space between the outer diameter of the insulator sheath and the inner diameter of the electrical connector. The sealing system includes: (a) an electrical contact having a contact element and a tail portion, the tail portion being adapted to be crimped onto one of the cables; and (b) a flexible sealing sleeve molded onto the tail portion of the electrical contact, the sealing sleeve being adapted to seal the space.
