Abstract (en)

[origin: US4698768A] A process for smoothing curves, comprising previous storage of a predetermined number of patterns formed from at least two adjacent pixels disposed on the same line or in the same column, step-by-step calculation of the theoretical curve to be plotted, determination for each of the pitches of the pixel closest to the theoretical curve to be plotted, measurement of the distance e from this pixel to the theoretical curve, determination as a function of this distance e of the pattern which corresponds to the elementary position of the curve to be plotted and illumination of the pattern on a visualization surface.

Abstract (fr)

L'invention concerne un procédé de lissage de courbes générées pour un balayage de télévision. Ce procédé consiste à utiliser, pour effectuer le tracé des susdites courbes, des motifs composés d'au moins deux pixels dont le barycentre est positionné sur la courbe à tracer. La génération des courbes peut s'effectuer selon le principe de l'algorithme de Bresenham. L'invention s'applique notamment aux dispositifs d'affichage.
