Abstract (en)

[origin: EP0037452A2] Fire barrier for a passage opening (2) through which an interrupted rail track (4) of a conveying installation passes. The gap (5) between the rails is bridged by a rail portion (16) which is secured on a suspension (18, 20). The suspension (18, 20) is arranged outside the outline of the passage opening (2) and held on a slide-like shut-off element (10) which can be moved in front of the passage opening (2) and into the gap (5) between the rails. During this process, the rail portion (16) is displaced into a rest position (13). (Fig. 1). <IMAGE>
