Abstract (en)
Cutting machine for cutting tube blanks (10) into tubes, with four spindles (1-4) onto which the tube blanks are successively placed, calibrated, cut into lengths, and removed at individual stations for each step. The spindles are mounted on a round turret (5), and as it is rotated in 90 DEG steps, the spindles are moved from one station to the next. By calibration, in which a calibrating ring (20) is pressed over the tube blank (10), the finished tubes are given a very exact diameter and evenness.
