Abstract (en)
[origin: EP0037806A2] 1. Device projecting balls by elastic impact, provided with a striker means (1) mounted on the end of a striker lever (2) or the like in order, at the end of the travel of the striker lever (2) or the like, to strike a ball (8) placed on a presentation element (7) and to project said ball along a firing axis, characterised in that the said striker means (1) is arranged to comprise a plurality of striker elements (5) which come into contact with the ball (8) simultaneously and are situated symmetrically with respect to the plane in which the striker lever (2) is displaced, and in that the said projecting device comprises a means (10, 13, 14) for causing deviation of the ball (8), said means being arranged to present or withdraw deviation-causing elements (18) which come into contact with the ball (8) simultaneously and which are arranged symmetrically with respect to the vertical plane extending down the axis of firing.
