Abstract (en)
[origin: EP0038155A1] A bed, chair, or couch providing a high standard of comfort for all types of user including sufferers from back complaints. The invention as applied to a bed comprises a frame having spaced side members (12) and a body support surface formed by a plurality of slats (20) extending transversely of the frame and guided for vertical movement in slots (22) formed in the side members. The end portions of each slat (20) engage, respectively, an elongate resilient tube (18) housed in a channel shaped member (14, 16) such that, in use, the support surface formed by the slats (20) conforms to the profile of a user's body in contact therewith.
