Abstract (en)  
[origin: EP0038291A1] 1. A motor drive for low-voltage protective switches (1) having an operating handle (5) and a carrier plate (12) secured to the housing of the protective switch, for a slide (27) which engages over the operating handle (5) through a window-like opening (28) and which can be reciprocally driven, characterised in that, between the operating handle (5) and the opening (28) of the slide, there is arranged a cylindrical body (32) which surrounds the end of the operating handle (5) the cylindrical axis of which runs parallel to the plane of the slide (27) and which is secured against escaping radially by a guide track (34).
