Abstract (en)
[origin: EP0038375A1] 1. Device for splitting pieces of wood with a support (3) for the bearing housing (1) for the pieces of wood, which accommodates a splitting wedge (2) and which is fixed by means of strapping (8) and lugs (6, 18) to the chassis of an agricultural tractor and where by the splitting wedge (2) is connected to the moveable part of a hydraulic cylinder (10), characterized in that the bearing housing (1) engages with a protruding pin (18) below the housing, in the trailer coupling of the tractor and which can be attached by means of the strapping (8) to the front-end loader bearings (22) of the tractor and that the splitting wedge (2) is connected to the moveable part (11) of a hydraulic cylinder (10) which is part of the tractor and which can be brought into the neutral position by means of a re-setting spring (12, 17).
