Abstract (en)  
[origin: EP0038794A2] 1. A grinding plant comprising a rotating horizontally arranged grinding drum (4) on whose one end an axial entrance opening (3) and on whose other end an axial delivery opening (12) are provided, characterised in that the delivery opening (12) runs into a rotating rotationally symmetrically designed delivery chamber (20, 46) arranged coaxially with the grinding drum (4), whose shell parts (22, 23, 25) conveying the grinding stock extend from a level below the delivery opening as far as to such a high level above the delivery opening (12) that it can be conveyed to subsequently arranged follow-on machines (17) without the help of an additional upwards conveyor, and that the delivery chamber (20, 46) comprises a pick-up means (31, 32, 35) for the grinding stock above the delivery opening (12).
