Abstract (en)  
[origin: ES8203185A1] A switching and control apparatus, comprising: a stepping switch with a rotatable controller barrel a regulator having a rotatable setting shaft drivable by the controller barrel a clutch, including a regulator-side coupling member fixed for rotation together with the setting shaft, effective over a predetermined range of angular regulator settings, in which the controller barrel drives the setting shaft, and ineffective at angular settings beyond the predetermined range, during which the setting shaft is not driven by the controller barrel and, a spring-loaded arrangement for restraining rotational movement of the regulator-side coupling member during movement of the controller barrel beyond the predetermined angular range.
