Abstract (en)
[origin: WO8101102A1] The medicine for the treatment of viral infections of the eye and other organs made of antiviral substance, adjuvants and vehicles, further contains one or a plurality of known antibiotics, optionally in a separate preparation. The bacterial infections present besides viral infections may then be fought against by means of the antibiotic, thus preventing the formation of bacterial enzymes, such as hyaluronidase, which inhibit the formation of interferon in the cell. The presence of a bacterial infection before and/or during a viral infection may be revealed by the presence of bacterial enzymes before and during the viral disease.

Abstract (fr)
Le remede pour le traitement des infections virales de l'oeil et d'autres organes a partir de substance antivirale, d'adjuvants et vehicules, renferme en outre un ou plusieurs antibiotiques connus, le cas echeant dans une preparation separee. Les infections bacteriennes presentes a cote des infections virales, seront ainsi combattues grace a l'antibiotique, empechant ainsi la formation d'enzymes bacteriens, comme l'hyaluronidase, qui inhibent la formation d'interferon dans la cellule. La presence d'une infection bacterienne avant et/ou pendant une infection virale peut etre mise en evidence par la presence d'enzymes bacteriens avant et pendant la maladie virale.
