Abstract (en)
[origin: EP0039448A2] For the production, in particular, of noise protection walls, simple and therefore economically producible slab-shaped concrete elements are used which are assembled by pressing together in such a way that all the concrete elements lie in planes which are at an acute angle to the plane of the wall. This results in a very irregular wall structure on the visible surfaces, and this structure offers a high degree of noise absorption, on the one hand, and is also aesthetically satisfying on the other. Planting of plants is also possible. <IMAGE>
