Abstract (en)

[origin: WO8101542A1] A model having a flying saucer shaped body (111) which is provided with lift by means of a thrust producing device such as a reciprocating Wankel or turbine engine (102) and a propeller (101). The body (111) is prevented from rotating by means of counter-rotational fins (105A, B) and stability in the horizontal plane is provided by means of an internal gyro rotor (104) actuated by the airflow from the propeller (101).

Abstract (fr)

Un modele ayant un corps en forme de soucoupe volante (111) pourvue de sustentation au moyen d'un dispositif de production de poussee tel qu'un moteur a turbine ou Wankel a mouvement alternatif (102) et une helice (101). On empeche le corps (111) de tourner a l'aide d'ailerettes de contre-rotation (105A, B) et la stabilite dans le plan horizontal est assuree a l'aide d'un gyro rotor interne (104) actionne par l'ecoulement d'air provenant de l'helice (101).
