Abstract (en)  
[origin: EP0040719A2] 1. A drying device having a fan, by means of which preferably heated air may be conveyed into the interior of a bowl of a toilet or bidet, in order to dry the lower body area, at least two apertures (52, 54, 74, 76) being provided, through which the air flows into the interior (68), characterized in that the apertures (52, 54, 74, 76) are formed and arranged such that the emerging airstreams (56, 58) meet one another and whirl below the lower body area (26) without blowing directly against the latter.
