Abstract (en)
[origin: ES264802U] Terminal elements for interconnecting insulated wires. Twin-contact terminal elements are formed of leaf-shaped sides of resilient contact material, each side having a slot for solderless, screwless and stripless clamping contact with an individual wire. The terminal elements are V-shaped, a plurality of which can be mounted in an insulative terminal strip so that each two adjacent terminal elements are disposed with their sides in parallel confronting relationship.
