Abstract (en)

[origin: WO8101502A1] The front part (1) of a removable portion of a piece of furniture, for example a drawer (3), is adjustable in elevation and laterally as well as tensionwise by means of mutually engaging hooks, located rearwards. The construction and handling as well as access are simplified. Horizontal guides (12, 13) are positioned close to both lateral edges, before the front wall, for a lateral hook (8), open frontwardly, adjustable by means of a screw (22) engaged in the sliding foot (11) of the hook. The head (25) of the screw abuts against a lateral wall (23). A second hook (7), located behind the front wall (1) is engaged with the first one.
